---

### **Rental Rules and Guidelines**

Each display-case needs to be plugged in to a separate circuit, with no other appliances utilizing the same circuit (please note, separate outlets do not necessarily translate into separate circuits).

The customer is responsible for providing the required electricity needed for each machine, and for measuring any doorways, elevators, hallways, etc. that the display-case will need to pass through to get to the serving location once it's taken out of the truck.

Since our machines are fragile and heavy, all display-cases must be transported on flat surfaces only (i.e. no stairs, steps, etc.). Handicapped ramps or a freight elevator on-site is required to move any of our machines from ground level.

To maintain the highest quality gelato during outside events, display-cases must be in a covered area and not in direct sunlight.

If a Paciugo display-case is left on the customer's premises, in the absence of a Paciugo representative, a deposit may be required and will be held to the customer's major card (Visa, MasterCard or American Express). The safety and security of the display-case is the responsibility of the customer.
